

Guest Lecture: Zico Kolter

Zico Kolter is a Ph.D. candidate in the Computer Science Department at Stanford University, working in machine learning and control. He led Stanford's LittleDog team, an effort to extend the state of the art in quadruped robot locomotion over rough terrain. Currently, he is working on machine learning applied to a variety of energy and sustainability related projects, including automated building control, autonomous aircraft formation flight, and kite-based power generation.
