Spring 1998 D.A. Patterson

Course Feedback Number 1
CS252 Graduate Computer Architecture

Feedback Goals:
The purpose of this feedback is to help the TAs and instructors do a better job this semester and to improve CS 252 for future semesters. Please enter your name. (If you want to also turn in an anonymous form, just take a second form.) Use additional paper if necessary.

Name:

1. Prerequisite check
This semester we tried to ensure that everyone had taken the prerequisites and would review that material by having a prerequisite quiz. This in turn allowed me to skip some of the basic material. Please pick one of these choices:
A) Good idea. Got me to remember what the material was before I needed it in class, and later lectures didn't have to repeat material we should know.
B) I had just taken the prequisites so the review was of minor benefit.
C) It was a hardship to have an exam in the second week of classes, and I didn't get any benefit from the exam.
Other comments or suggestions?

2. Constructive criticism for TA, Joe Gebis
Any suggestions or comments are welcome.

3. Constructive criticism for Dave Patterson
Any suggestions or comments are welcome.

4. Suggestions for improving cs252
Any suggestions or comments are welcome, especially if they can be implemented this semester. (If you have an idea how instructional computing can make computers more reliable, let me know.)
