## Tomorrow's Tic-Tac-Toe

Pieces and Board: This game is played on a rectangular $n$ rows by $m$ columns board. The default game has 3 rows by 4 columns with the configuration of Figure 1.

To Move: Players alternate placing their pieces (which are usually X's and O's) on the board in empty spaces.

To Win: The first player to reach 3-in-a-row (horizontally or vertically) with their pieces wins. If the board is filled and nobody has done this, the game is a tie.

## Compulsory Rule Changes:

- Misére Rules: 3-in-a-row loses.
- Allow for diagonal wins.

## Position Representation:

- (T row row row ...)
$T$ stores whose turn it is ( x or $\circ$ ), Each row is in the form $p p p \ldots$ where $p$ is " x " or " $\circ$ ", representing the corresponding piece on the board, or "-" if blank. The number of row's in the position indicates the number of rows. In each row, the number of $p$ 's indicates the number of columns.

Example game:

0
