Research Interests

In the near future, swarms of millimeter scale robots will be vital and common tools in industrial, commercial, and personal settings. The research effort to get us there is inherently interdisciplinary and represents a tremendous opportunity for collaboration, for training a new generation of interdisciplinary investigators, and for forging new ties between the worlds of industry, academia, and design; I look forward to pushing it forward.

microrobotics, human-robot coordination and collaboration, wireless sensor networks, user-centered design, swarms

Education

Stanford University

Postdoctoral Fellow, Mechanical Engineering

Funded proposal: "Design and Control of Heterogeneous Microrobot Swarms"

Advisor: Sean Follmer

California, USA

2019 -

University of California, Berkeley

PhD, Electrical Engineering and Computer Science

Dissertation: "The Ionocraft: Flying Microrobots with No Moving Parts"

Committee: Kristofer S. J. Pister, Michel Maharbiz, Liwei Lin

California, USA

2013 - 2018

Virginia Polytechnic Institute

BSc, Materials Science and Engineering

Virginia, USA

2009 - 2013

Research Experience

Autonomous Flying Microrobots

PI: Kristofer S. J. Pister

I have designed and built the ionocraft, a flying microrobot based on electrohydrodynamic propulsion; it flies completely silently and with no moving parts.

UC Berkeley

2013 - present

Next-Generation Wireless Sensor Networks

PI: Kristofer S. J. Pister

New ubiquitous computing platforms enabled by modern microelectronics and mesh networking implementations will move us from an Internet of Things to an Internet of Everything.

UC Berkeley

2017 - present

Novel Embedded Systems Debugging and Development Tools

PI: Bjoern Hartmann

A new generation of Makers requires a new generation of tools for designing and debugging cyber-physical systems.

UC Berkeley

2014 - 2018

A Low-Loss Voltage Actuated Switch Using Polymer-Metal Nanocomposite

PIs: Vladimir Bulovic & Jeffrey Lang

Micro electromechanical system-based switches hold promise for circumventing some of the issues with leakage and energy-per-operation of traditional CMOS.

MIT

Summer 2012

Design and Construction of a Reduced-Scale Railgun

PI: Hardus Odendaal

An interdisciplinary effort in system design; my responsibilities ranged from safe encapsulation of high power density inductors to mechanical design of a "catch" for the projectile.

Virginia Tech

2011 - 2012

Refereed Publications

In the field of human-computer interaction, top-tier ACM conferences (e.g. CHI, UIST) are highly selective venues that are comparable to or exceed many IEEE journals in their impact. In the fields of both MEMS and robotics, full-length paper submissions to conferences such as MEMS, Transducers, IROS, ICRA, and RSS represent the ideal publication track for the majority of researchers.
