Lecture \# IO: Clipping and Hidden Surfaces

Prof. James O'Brien University of California, Berkeley $\qquad$
$\qquad$
$\qquad$

## Today

$\qquad$
$\qquad$
$\qquad$
$\qquad$

- Clipping $\qquad$
- Clipping to view volume $\qquad$
- Clipping arbitrary polygons
$\qquad$
Hidden Surface Removal
- Z-Buffer
$\qquad$
- BSPTrees $\qquad$
- Others $\qquad$
$\qquad$

|  | Clipping |
| :--- | :--- |
|  |  |
| - Stuff outside view volume should not be drawn |  |
| $\cdot$ | Too close: obscures view |

|  | Clipping |
| :--- | :--- |
|  | - Stuff outside view volume should not be drawn <br> • Too close: obscures view <br> • Too far: <br> • Complexity <br> • Z-buffer problems <br> • Too high/low/right/left: <br> • Memory errors <br> • Broken algorithms <br> • Complexity |
| Sunday, October 6,13 |  |

| Clipping Line to Line/Plane |
| :---: |
|  |

## Polygon Clip to Convex Domain

- Convex domain defined by collection of planes (or lines or hyper-planes)
- Planes have outward pointing normals
- Clip against each plane in turn $\qquad$
- Check for early/trivial rejection $\qquad$
$\qquad$
$\qquad$

## Polygon Clipping

- Find the part of a polygon inside the clip window? $\qquad$

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Before Clipping

## Sutherland-Hodgman Clipping

- Clip to each window boundary one at a time

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Sutherland-Hodgman Clipping

- Clip to each window boundary one at a time

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Sunday, October 6, 13

15

## Sutherland-Hodgman Clipping

- Clip to each window boundary one at a time

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Polygon Clip to Convex Domain

## Polygon Clip to Convex Domain

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

- Sutherland-Hodgman algorithm
- Basically edge walking
- Clipping done often... should be efficient
- Liang-Barsky parametric space algorithm
- See text for clipping in 4D homogenized coordinates
$\qquad$
$\qquad$
$\qquad$

Sunday, October 6, 13

21

Hidden Surface Removal

- True 3D to 2D projection would put every thing
overlapping into the view plane.
- We need to determine what's in front and display only that.

Sunday, October 6, 13

23
$\left.\begin{array}{|l|l|}\hline & \text { Z_Buffers } \\ \hline & \\ \text { - Benefits } \\ \text { • Easy to implement } \\ \text { • Works for most any geometric primitive } \\ \text { • Parallel operation in hardware } \\ \text { - Limitations } \\ \text { • Quantization and aliasing artifacts } \\ \text { • Overfill } \\ \text { • Transparency does not work well }\end{array}\right]$

24
Sunday, October 6, 13

$25$

|  | A-Buffers |
| :--- | :--- |
|  |  |
| - Store sorted list of "fragments" at each pixel |  |
| - Draw all opaque stuff first then transparent |  |
| - Stuff behind full opacity gets ignored |  |
| - Nice for antialiasing.... |  |

27

## Scan-line Algorithm

- Assume polygons don't intersect
- Each time an edge is crossed determine who's on top

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

|  | Painter's Algorithm |
| :--- | :--- |
| - Sort Polygons Front-to-Back <br> - Draw in order <br> - Back-to-Front works also, but wasteful <br> - How to sort quickly? <br> - Intersecting polygons? <br> - Cycles? |  |

29

## BSP-Trees

Binary Space Partition Trees

- Split space along planes
- Allows fast queries of some spatial relations
- Draw Front-to-Back
- Draw same-side polygons first
- Draw root node polygon (if any)
- Draw other-side polygons last
