\[ f = \frac{P \cdot a}{1000\text{mm}^2} \]

\[ P = 400\text{kg/m}^2 \]

If plot is 100x100m, \( F = 4 \times 1000\text{mm}^2 \)

\[ \text{H}_2\text{O} \]

\[ \frac{\text{m}^2}{t^2 \text{m}^2} \]

\[ h = \frac{t}{2} \text{ m} \]

\[ \frac{1}{t} = \frac{x}{h} = \frac{-L}{2A} \]

\[ f = -\frac{df}{dx} = \frac{x}{h} \text{ m} \]

\[ f = \frac{L}{h} \text{ m} \]

For water, \( f = \frac{2}{t} \text{ m} \)

3. Ambigue = solid, liquid, gas (Gzt).

Surface tension, surface tension.

\[ f = \frac{L}{h} \text{ m} \]

\[ \text{Total force} = \text{surface tension} \]

\[ \text{ curator, due to surface tension.} \]

\[ \text{During recoil, density usually increased.} \]

\[ \text{Get stock.} \]

\[ \text{Use surface tension to bend...} \]

\[ \text{Stock, during formation or...} \]

\[ \text{Shocks, prior to...} \]

\[ \text{Q: Departure at month } \]

\[ \text{M1L2, due to...} \]

\[ \text{Shocks, prior to...} \]

\[ \text{Papers assigned.} \]

\( f = \frac{L}{h} \text{ m} \)

\( \frac{dF}{dx} = \text{surface tension} \)
Surface tension is sexual.

0.36 billion conflicts underpinned by seed.
