

Multiple 4-stub Dyck funnels linked into symmetrical clusters based on Platonic and Archimedean polyhedra

Introducing the basic 4-stub Dyck funnel:

Single funnel, two handles, 2-sided surface.

Single funnel, two cross handles, single-sided surface.

Four funnels, 8 handles, 2-sided surface.

Regular clusters:

Tetra-cluster, 6 funnels, genus 14.

Cube-cluster, 12 funnels, genus 26.

Octa-cluster, 12 funnels, genus 26.

Dodeca-cluster, 24 funnels, genus 50.
